

NEW

# NEW MIRRORS FOR NEW PROJECTS.

With its new mirror program, Duravit introduces versatile design solutions to both the private and commercial bath environment. Choose from two different options to bring optimal, warm illumination to your space and reflect your individual taste.

## Dual light fields

Two vertical lighting elements (> 300 LUX) provide direct illumination. The specifically-developed deflector profile can be found in this version, which provides optimal, even light with a high light yield. Optionally available with downlight and defogger.

## Indirect ambient light

The mirror with ambient light provides indirect illumination from all four sides. While creating a soft, radiant atmosphere, the mirror simultaneously provides delicate lighting for the user's face. Optional mirror heating prevents fogging.

All mirrors are available in two different variants: Standard - Premium.

## STANDARD

With the "Standard" variant, all models are operated via wall switch.

Light via wall switch

## PREMIUM

All mirror models have module lighting. The light is switched on and off via sensor with a simple hand motion. The mirror's integrated heating element prevents fogging.

Light via sensor operation
